Sightline Prompter

Your words. Your pace.

A see-through desktop teleprompter for speakers, content creators and learning teams recording to camera.

By a speaker, for speakers. By a content creator, for content creators.

Keep your script near the lens while seeing the slides or call behind it. Choose voice following or a steady pace. Pause, retake and mark a keeper without losing the thread.

From script to handover

- **Prepare:** open Markdown, Word, PDF or a Google Docs link. Add optional sections, stops, beat marks and markers.
- **Present:** use voice, phone, keyboard or a floating pad. Fit text, contrast and mirroring to your setup.
- **Review:** hand over take references, keeper choices and estimated word alignment with your master recordings.

AI is optional

Write your own script, or use your chosen assistant for preparation, local control or interpreting an edit pack. The local rehearsal checks do not require generative AI.

Frozen 1.1.0 test workflow

Optional OBS controls, a recorded-slate route and a manual Ideal/Actual head guide. Shared pad/phone fitting, listening and session checks. Script health and rehearsal review.

Private Stream Deck 0.2.0 adds guide dials, listening recovery and an optional one-second hold to finish recording.

Your recording tool stays

OBS or your usual recorder supplies production video/audio. Optional microphone scratch audio helps with sync. Check timing, captions and capture exclusion on your setup; the guide is manual.

> **31 October 2026:** public download **1.0.6**. **1.1.0 + private plugin 0.2.0** are frozen for final acceptance, not publicly released. Marketplace submission is pending. The app targets Windows, macOS and Linux; the frozen installer is Windows. Stream Deck is for Windows/macOS.

Free, and always will be. No Sightline account or subscription. Local speech works offline after the model download. Optional Deepgram sends audio online; AI services have their own terms.
